Augusto Lemble

Blockchain Architect • Smart Contract Engineer • Technical Lead
Mar del Plata, Buenos Aires, Argentina
augustol.eth - augustolemble@pm.me

Blockchain Architect with 10+ years in decentralized systems, smart contracts, DAO governance, and DeFi infrastructure. Led protocol development, managing +$100M in assets, conducted security audits, deployed without issues, and built multiple production-ready Web3 products end-to-end. Strong leadership experience as founding member of DXdao and Winding Tree. Hands-on full-stack JS/Solidity engineer shipping secure, scalable systems.

Core Skills

- **Web3 & Smart Contracts:** Solidity, Hardhat, Ethers.js, DEFI, DAO governance, on-chain security
- **Backend & Full-Stack:** Node.js, TypeScript, Next.js, IPFS, Postgres, Redis, REST/GraphQL
- **Leadership:** Technical lead, mentoring, architecture decisions, roadmap ownership
- **Builder & Open Source:** Open-source contributor (ERC-827, GitPOAP top 50), hands-on dApp development, protocol design, rapid prototyping of Web3 products.

Experience

Founder - Openscan - openscan.eth.link - 12/2025 - present

- Founded and built an open-source, trustless multi-chain blockchain explorer supporting Bitcoin, Ethereum, and Layer 2 networks (Arbitrum, Optimism, Base, Polygon, BSC).
- Architected a fully client-side application that connects directly to blockchain nodes via RPC, eliminating intermediaries and centralized services.
- Developed smart contract interaction features, including read/write operations on verified contracts, and built developer tools such as a Hardhat plugin and network connectors.
- Deployed the application on IPFS for censorship-resistant hosting, built with TypeScript and modern frontend tooling (Bun, Vite).

Technical Lead - DXdao 03/2020 - 04/2023

- Led development of decentralized governance infra managing **$100M+ in DAO assets.**
- Designed and deployed **smart contracts** with zero critical vulnerabilities
- Built **Swapr (Uniswap V2 fork)**, introducing new governance features.
- Led a distributed team of 20 contributors across 5 countries
- Organized Devcon 2022 hackathon with **200+ participants.**
- Defined security processes and performed audits across org products.

Smart Contract Specialist - LevelK 06/2018 - 04/2019

- Performed Solidity security audits leading to successful production deployments.

- Delivered threat modeling and code-review processes for multiple Ethereum-based applications.

Founder & Blockchain Architect - Winding Tree 11/2016 - 06/2018

- Designed the blockchain architecture powering a decentralized travel marketplace.
- Led protocol design, smart contract development, and technical strategy.
- Helped secure **$20M in funding** during 2017 ICO while ensuring an investor-protection token validation mechanism.
- Coordinated partnerships and integrations with major corporate partners.

Full Stack Blockchain Developer - CoinFabrik 10/2016 - 06/2017

Developed full-stack crypto solutions using JS, Solidity, and Ethereum tooling.

Ethereum Developer / Development Consultant - CrowdJury 03/2016 - 03/2017

Guided smart contract development and design for decentralized governance systems.

Front End Developer - Ambisafe 05/2016 - 10/2016

Built UI and smart contract integrations for Ethereum-based financial products.

Full Stack Developer - incorporations.io 06/2015 - 02/2016

Built a production MEAN-stack web platform.

QA Analyst - Devspark, Discovery Communications 06/2013 - 02/2014

Developed automated testing tools using Java, Selenium, and TestNG.

Personal Projects

FullStack JS & Solidity - FlashLender 08/2024 - Present

Open-source flash loan platform enabling lending and yield on any ERC-20 token. Built with Solidity, Hardhat, TypeScript. https://github.com/AugustoL/erc20-flash-lender

FullStack JS & Solidity - AlohaToken 01/2024 - Present

dApp rewarding real surf sessions with on-chain tokens. Includes smart contracts, web app, and signature server. https://github.com/AugustoL/AlohaToken

Achievements

- Co-founded a DAO managing **$100M+** with 20+ contributors.
- Delivered blockchain talks onboarding hundreds since 2015.
- Contributor to Ethereum ecosystem (ERC-827).
- Led Uniswap V2 fork (Swapr) introducing new decentralized trading features.
- Conducted Solidity audits deployed to production with zero major issues.
- Early builder: launched first fully functional website at 16; built Linux-based infra for school at 17.

Education

Technician in Programming **2009 - 2013, Faculty of Exact Sciences, UNICEN.**
